On the basis of the methodical researches done with the help of the Hungarian Scientific Research Fund (OTKA) support such a branch informational database could be formed which is new in its quality. Besides directly processing statistically this informational database, possible theoretical models were examined and new procedures were elaborated<sup>[1]</sup>. Within the frames of the research we tried such methods on the test data of the primary and secondary database enlarged on the basis of the theoretical concepts, which can – after the starting and functioning of the informational system – offer such results which can be used on regional and national levels<sup>[2]</sup>. These methodical examinations also meant both the application of the already existing procedures and the elaboration of completely new procedures.
